MdToPdf Feature Tour

A dependency-free **Markdown -> PDF** converter. It supports *italic*, **bold**, ***both***, ~~strikethrough~~, `inline code`, links, autolinks like https://github.com, bare URLs such as https://dotnet.microsoft.com, and escaped *stars*. Swedish works too: Räksmörgås, åäö ÅÄÖ — “smart quotes” … and the € sign.

This line ends with two spaces
so this one starts on a new line. Entities: © & <tag> ™

Jump to the table section or the code section.

Lists

- First bullet with **bold** text
- Second bullet that is long enough to wrap onto the next line, so we can check that the hanging indent lines up nicely under the text
  - Nested bullet
  - Another nested one
    1. Deeply nested ordered
    2. Second
- Back at the top level

1. Ordered item
2. Ordered item with a continuation paragraph

   This paragraph belongs to item two.
3. Third

Quotes

> A blockquote with *emphasis* and a link.
>
> Second paragraph in the quote.
>
> > Nested quote.

Code

```
// Fenced code block
static int Fib(int n) => n < 2 ? n : Fib(n - 1) + Fib(n - 2);
Console.WriteLine(Fib(20)); // a very long line that will need to be hard-wrapped beca
use it is far wider than the page column allows
```

```
Indented code block
second line
```

Tables

Feature	Status	Notes
Headings	x	H1–H6, ATX and setext
Emphasis	yes	`*`, `_`, `**`, `__`, `~~`
Tables	yes	Alignment, wrapping, header repeats on new pages
Images	yes	JPEG and PNG (incl. alpha)

Setext Heading

Some text, then a rule:
